The Government Microcircuit Applications & Critical Technology Conference (GOMACTech) has become the premier forum for the dissemination of information of Government-funded microcircuit research-and-development programs and provides the opportunity for presenting leading-edge research and development as it applies to today's challenges.

At this time, GOMACTech is soliciting Exhibitors for GOMACTech 2009, to be held at The DoubleTree Hotel, Orlando, FL, on March 16-19, 2009.

Advanced sensors of all types are being rapidly created by advances in innovative technologies driven by micro/nano-systems science and engineering. The result is an explosion of increased capabilities and opportunities for unprecedented situational awareness. In our modern world, greater situational awareness is essential for "decision makers" both military and civil, to make the best choices and take appropriate actions. Greater situational awareness is vital to more effective scientific research, homeland defense, natural disaster response, diplomacy, asymmetric, and conventional warfare. Recent advances in sensor technologies are enabling more accurate, relevant, and timely information / situational awareness on the ground, at sea, in the air, in space, and even in cyber space. GOMACTech-09 highlights emerging highly innovative sensor technologies as well as emerging sensor applications that provide increased situational awareness to both the civilian and military communities.
