## GOMACTech-11

Securing the Future through Rapid Technology Insertion

March 21-24, 2011

Doubletree Hotel, Orlando, FL USA

In June 1994, Defense Secretary William Perry issued a directive to maximize reliance on existing commercial off-the shelf (COTS) electronics and directed the armed forces to buy products and components from commercial sources. The decision was based on reducing acquisition cost and eliminating outdated procurement regulations to take advantage of the exponential increase in commercial microelectronics capabilities (Moore's law). While technologies have continued to reach subsequently smaller nodes, market forces have driven manufacturing, capital equipment, and design to overseas sources. Although domestic defense systems have benefited from these technical advancements, these same enabling technologies are no longer solely available to the tactical advantage of the US and its allies. The nexus of integrated microsystems, systems-on-chip, and multiple viable semiconductor material systems presents new opportunities for functionality via heterogeneous integration (synthesis of dissimilar materials, circuits, and sub-systems). Design of these heterogeneously integrated microsystems will also require efficient small batch, custom, next generation design automation tools. The challenge of adaptive threats in the asymmetric paradigm drives the need for higher level integration and transition methodologies.

The Government Microcircuit Applications & Critical Technology Conference (GOMACTech) is the premier forum for reporting on government funded micro and nano-electronic research and complementary efforts that focus on the technology needs of government systems.

**Exhibit space will be rented at \$2100 for each 8 ft. deep by 10 ft. wide booth**

Every effort is being made to assure attendees' participation in the Exhibition. An afternoon break on Tuesday and morning and afternoon breaks on Wednesday will be held in an area inside the Exhibit Hall. Technical sessions will be held on Tuesday through Thursday from 8:30 am to 12:00 pm and from 1:30 pm to 5:00 pm.

The Government Microcircuit Applications & Critical Technology Conference (GOMACTech) has become the premier forum for the dissemination of information of Government-funded microcircuit research-and-development programs and provides the opportunity for presenting leading-edge research and development as it applies to today's challenges.

At this time, GOMACTech is soliciting Exhibitors for GOMACTech 2011, to be held at Doubletree Hotel, Orlando, FL, on March 21-24, 2011.

In June 1994, Defense Secretary William Perry issued a directive to maximize reliance on existing commercial off-the shelf (COTS) electronics and directed the armed forces to buy products and components from commercial sources. The decision was based on reducing acquisition cost and eliminating outdated procurement regulations to take advantage of the exponential increase in commercial microelectronics capabilities (Moore's law). While technologies have continued to reach subsequently smaller nodes, market forces have driven manufacturing, capital equipment, and design to overseas sources. Although domestic defense systems have benefited from these technical advancements, these same enabling technologies are no longer solely available to the tactical advantage of the US and its allies. The nexus of integrated microsystems, systems-on-chip, and multiple viable semiconductor material systems presents new opportunities for functionality via heterogeneous integration (synthesis of dissimilar materials, circuits, and sub-systems). Design of these heterogeneously integrated microsystems will also require efficient small batch, custom, next generation design automation tools. The challenge of adaptive threats in the asymmetric paradigm drives the need for higher level integration and transition methodologies. GOMACTech-11 provides a forum for discussing and demonstrating advanced microelectronics that will provide these leap-ahead electronics technologies to gain an efficient tactical advantage. GOMACTech is the premier forum for reporting on government funded micro and nano-electronic research and complementary efforts that focus on the technology needs of government systems.
