

Saverio Fazzari works for Booz Allen acting as a senior technical advisor in Microelectronics, with over 30 years' experience across the research, development, manufacturing, and policy domains to DARPA and other government agencies for numerous programs. Mr. Fazzari has a strong background in all areas of semiconductor design and fabrication, from algorithm development through device implementation. His specialty is advanced circuit design and development strategies with a focus on hardware cyber security issues including trusted design and fabrication. Mr. Fazzari's experience includes extensive commercial experience, leading production innovation, and development across all facets of the electronic design process. He has a BSEE from Johns Hopkins, and MSEE from the University of Pittsburgh. He has published over 14 papers in industry journals and technical conferences.
